Radiosurgery Society

CERTIFICATION SERVICE

ISRS IS COMMITTED TO RAISING THE LEVEL OF QUALITY OF SRS AND SBRT TREATMENT DELIVERY AROUND THE WORLD AND PROMOTING THE HIGHEST LEVELS OF CLINICAL EXPERTISE.

Our [Certification Service](#) recognizes centers that demonstrate best practices and standards in terms of patient selection, treatment planning, dosimetry and patient care in intracranial SRS and extracranial SBRT, providing value through:

Policies and Procedures: An in-depth audit of departmental processes to ensure standards are fulfilled

Personalized, on-site education: An in-person visit by experts ensuring confidence in delivering quality treatment to your patients

End-to-end testing: Satisfying the requirements of an external dosimetrical audit

Formal ISRS recognition: Emphasizing your commitment to the highest quality standards in SRS and SBRT

Streamlined recertification: 3-year follow up ensuring you maintain quality SRS and SBRT standards long-term.

To prepare for a successful dosimetry audit, centers have the opportunity to enlist the consulting services of [RTsafe](#), which specializes in end-to-end SRS and SBRT external dosimetry evaluation, using the same equipment and methodology as ISRS auditors.

WHO SHOULD APPLY FOR THIS UNIQUE FACE-TO-FACE PERSONALIZED SERVICE?

The ISRS Certification Service is equally suited to:

- Experienced centers
- Centers that have implemented SRS and SBRT programs but may not yet be treating larger numbers of patients or indications

It provides an invaluable educational opportunity through an in-person external audit.

WHY SHOULD YOUR CENTER BECOME ISRS-CERTIFIED?

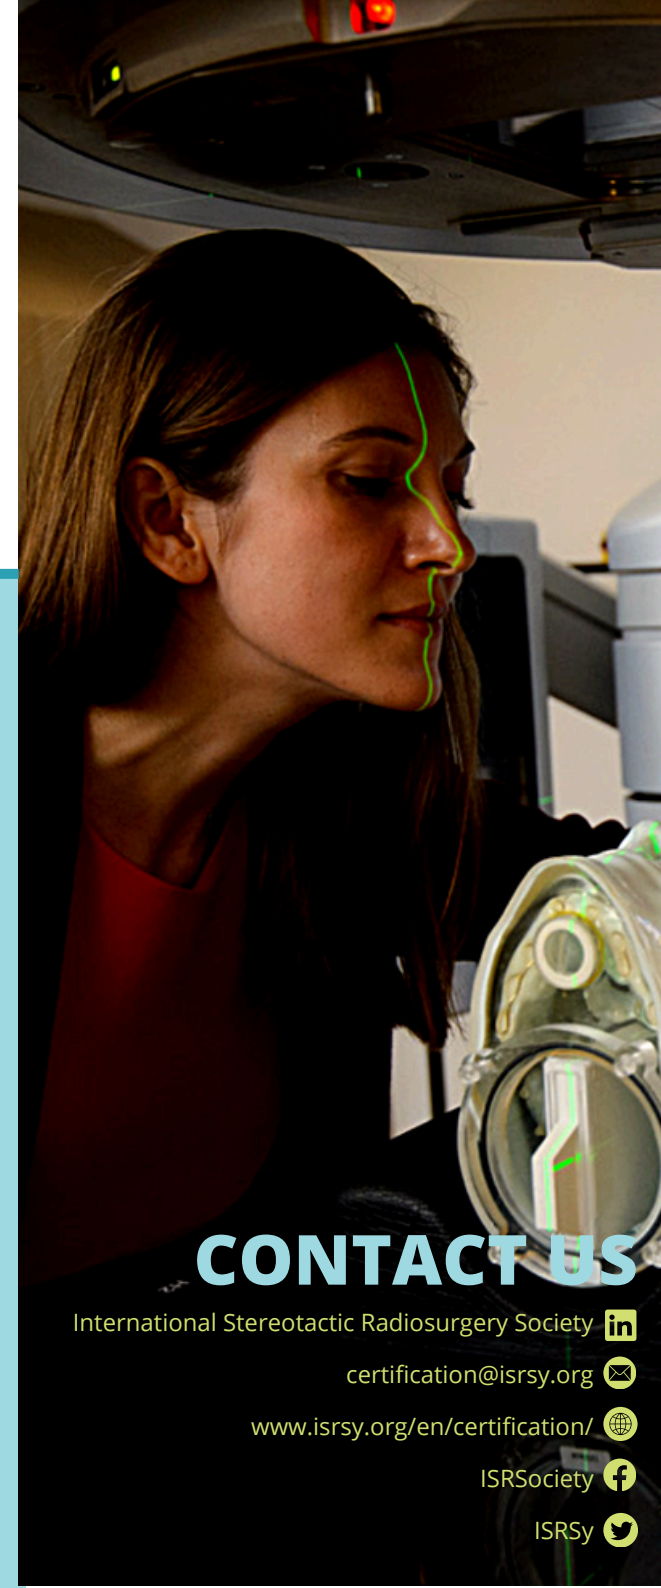

Even the best SRS and SBRT centers can benefit from an independent external assessment conducted by a device-agnostic organization. External dosimetrical audits are now strongly recommended or even mandatory in some countries, and the ISRS Certification Service satisfies this requirement. In a competitive environment a certified center is able to demonstrate that their commitment to the highest standards has been recognized by ISRS, and can also accelerate improvements through the end-to-end testing process. Re-certification is also a streamlined and reduced-cost process.

Our global ISRS Certified Centers speak highly of this prestigious, personalized educational experience:

"The ISRS Certification Service was a fantastic educational opportunity. Our team had the chance to exchange knowledge and came out of the visit with several insights of how to improve our service. At the end of the day, that's what matters, that's what quality is. To search for ways to give a better treatment, a better care for our patients and our families every day."

- **Noel Guedes - Assistant Technical Director, Real Hospital Português, Recife, Brazil**
